UNIHUB KENYA

Verified Student Housing Platform

DATA PROTECTION IMPACT ASSESSMENT

UniHub: verified student housing platform

KenyaStudentHousingDiscoveryService,9thOctober2026

Conducted in accordance with section 31 of the Data Protection Act, No. 24 of 2019 and the *Office of the Data Protection Commissioner Guidance Note on Data Protection Impact Assessment*. Reported on the template at Part 5 of that Guidance Note.

Document control	Detail
Project	UniHub: Verified Student Housing Platform (public web application, pre-launch)
Data controller	UniHub Kenya, trading as UniHub
Assessment conducted by	Founder and Developer, shadrack@unihub.ke
Date of assessment	9th October 2026
Version	Drafted on the Part 1 to Part 5 structure of the Guidance Note. First version.
Status	PROCESSING NOT COMMENCED. No live personal data has been collected. All development and testing to date has used synthetic (invented) data. Statements about what the application code does are carried forward from the prior assessmentand are listed for verification in Annex 1.
Next review	Before any real listing is published or the platform is launched; thereafter quarterly, and on any change to the dataset, platform or purpose.
Classification	Confidential. Internal governance document.
Distribution	Data Protection Officer (when appointed), UniHub leadership, and the Office of the Data Protection Commissioner on request.

A. Screening: is a DPIA required?

Section 31 of the Data Protection Act ("Act") requires a Data Protection Impact Assessment ("DPIA") where a processing operation is likely to result in a high risk to the rights and freedoms of a data subject. Paragraph 9(A) of the Data Protection Impact Assessment Guidance Note ("Guidance Note") sets out the criteria to be considered. The project has been screened against each.

Three features of the project shape this assessment.

First, UniHub is a discovery and contact platform. It does not process tenancy agreements, collect rent, hold deposits or manage property.

Second, there are no accounts. A student browses listings without signing up, and UniHub collects nothing from the student. The only personal data a student provides is what the student chooses to send when clicking a WhatsApp or email link to a landlord or agent, and at that point the communication leaves UniHub's environment.

Third, landlord and agent onboarding begins on WhatsApp, outside the platform. UniHub holds no landlord account. It will, however, publish listing details once real listings are loaded, and that publication is treated in this assessment as processing of landlord and agent personal data (Risk R6).

The project alters the **means** by which students find rooms, a web platform in place of informal WhatsApp groups and notice boards. It does not alter the purpose, and the informal channels continue in parallel.

Criterion (Guidance Note, para. 9A)	Does it apply? Assessment
I. Automated decision-making with legal or similar significant effect	DOES NOT APPLY. The platform takes no decision about any student or landlord. There is no profiling, scoring or eligibility determination. The student initiates contact and the landlord responds. Nothing follows automatically from the platform's output.
II. Systematic monitoring	DOES NOT APPLY, subject to verification that no analytics or tracking script is present (Annex 1, item V1). The platform does not track location, movement or behaviour outside the browsing session, and requests no device location. Third-party hosts that serve map tiles and fonts receive the visitor's IP address when the page loads, which is addressed at Risk R1. UniHub does not itself observe or record individual visitors.
III. Sensitive personal data or data of a private nature	APPLIES IN PART, AT LAUNCH. No sensitive personal data is collected from students. However, "property details" fall within the definition of sensitive personal data in section 2 of the Act. Once real listings are published, a listing that identifies a landlord or agent together with a property's location and details may reveal the property details of an identified person. This is counteracted by publishing only the minimum fields, obtaining the landlord's written authorisation before publication,

	and publishing no identity-document numbers (Risk R6). The Data
Criterion (Guidance Note, para. 9A)	**Does it apply? Assessment**
	Protection Officer is asked to confirm this reading.
IV. Data processed on large volumes or large scales	doesn't APPLY. Assessed against the four factors in the Guidance Note: (a) number of data subjects: projected at fewer than 50,000 monthly visitors at maturity, from whom the only item held by hosting providers is a transient IP address; (b) volume and range of data items: none collected from students and a small set per landlord listing; (c) duration or permanence: session only for students, with no persistent identifier; (d) geographical extent: Kenya only, in eight campus towns. This is the criterion most sensitive to growth and is reviewed at 10,000 monthly visitors.
V. Matching or combining datasets	DOES NOT APPLY. The dataset is not combined with any other and is not reconciled against any fee, examination, disciplinary or other record.
VI. Data concerning vulnerable data subjects	APPLIES IN PART. An imbalance between a student (often a first-time renter, financially constrained and with limited awareness of data rights) and a landlord exists in the abstract. The platform is a discovery tool only; the student initiates contact; the claim “Verified listings” is to be qualified to “Landlord details reviewed before publish” (Risk R5); and the platform is directed at university students and collects no data from any visitor, so no child’s personal data is processed.
VII. Innovative use, or applying new technological or organisational solutions	APPLIES IN PART, AND NARROWLY. Keyless MapLibre GL mapping, video autoplay and server-side rendering are applied to an existing process (browsing rooms and contacting landlords) that is otherwise unchanged. No new category of data is created, no inference is drawn about any student and no profile is built.
VIII. Processing that prevents data subjects from exercising a right	APPLIES IN PART (POTENTIAL). The WhatsApp redirect moves communication outside the platform, and a student may not know how to ask a landlord to delete a conversation. A landlord whose details are listed must be able to have them corrected or removed. This is addressed by an email alternative, a published contact point and a takedown procedure (Risks R2 and R6).

Conclusion of screening. No criterion applies in full. Four apply in part: III (at launch), VI, VII and VIII. On the information now available, the processing is not likely to result in a high risk to the rights and freedoms of data subjects once the actions in Part 4 are complete. Two points prevent that conclusion from being drawn without qualification. The international transfer risk (R3) scores High under current controls, and the publication of real landlord listings (R6) introduces personal data that the prior assessment did not address. Whether section 31 compels a DPIA is therefore a question for the Data Protection Officer. This assessment proceeds on the footing that it does, so that the question does not delay the work, and it is recorded below on the template at Part 5 of the Guidance Note.

Part 1: Description of the processing operations

1.	**Project Name**	UniHub: Verified Student Housing Platform. A public web application that helps university students in eight Kenyan campus towns find rental rooms and contact landlords and agents.
2.	**Project Outline: What and why.**	The project replaces scattered WhatsApp groups and notice boards with one browsable site: a listings grid with filtering by category and location, an interactive campus map, residence video clips, and a link from each listing to WhatsApp or email. The processing involves serving static pages; filtering listings in the visitor's browser; rendering a map that loads tiles from third-party providers; redirecting the student to WhatsApp or email to contact a landlord; publishing landlord and agent listing details; and receiving landlord interest by a pre-filled WhatsApp message. There is no profiling, no automated decision-making, no account system, no combination with other datasets and, subject to verification (Annex 1, item V1), no cookies or analytics.
3.	**Who are the targeted data subjects?**	(i) Prospective student tenants and other visitors to the site. (ii) Landlords and agents whose listings are published, from launch. (iii) Landlords who message UniHub on WhatsApp to ask to list a property.
	a. What are the classes of data to be collected	**Visitors:** IP address, user agent and requested address, processed transiently by the hosting provider and by third-party hosts that serve map tiles, fonts and scripts. Nothing else is collected from a visitor, and no device location is requested (to be verified, Annex 1, item V3). When a student clicks a WhatsApp or email link, whatever the student then sends is received by the landlord and by the messaging provider, not by UniHub. **Landlords and agents, from launch:** name or business name, telephone and WhatsApp number, email address, property location and description, rent, and photographs or video of the premises. For landlords who message UniHub, the sender's number and the content of the conversation, held in UniHub's WhatsApp account. No identity-document numbers, payment data, biometric data or student location data is collected.
	NOTE on the prior assessment	The prior assessment stated that zero personal data is collected and that no landlord personal data is stored. That holds for browsing students. It does not hold once real listings are published or landlord conversations are held on WhatsApp. This assessment records the fuller inventory, and the discrepancy is addressed at Risk R6.
	b. What is the class of data subjects (i.e. are there any vulnerable	Visitors are mainly university students aged eighteen to twenty-five. The platform is directed at university students and collects no data from any visitor, so no child's personal data is processed under section 33 of the Act. Students are treated as potentially

	groups / children)	
		vulnerable for the reasons given at Part A, criterion VI.
4.	**Describe the Information Flow: the collection, use and deletion of personal data**	Set out at (a) to (h) below.
	a) Where you are getting the data from	Visitor technical data arises automatically when a browser loads a page. Listing details are supplied by landlords and agents through WhatsApp and entered by the founder. Photographs and video come from the landlord or from a visit by UniHub.
	b) How is the data being collected	Pages are served from the hosting provider. Listing details are held as data in the application's code repository (to be verified, Annex 1, item V5). Landlord interest arrives as a WhatsApp message to a UniHub number, which the landlord initiates.
	c) How much data is likely to be collected	Visitors: fewer than 50,000 a month projected at maturity, with an IP address only. Listings: the number of real listings at launch is to be confirmed before launch and recorded here.
	d) Where the data will be stored	Code and listing data: a GitHub repository synchronised with the Lovable editor, built and served from Vercel. Access logs: Vercel. Landlord conversations: UniHub's WhatsApp account and the founder's device.
	e) How long will the data be stored	Access logs: the provider default, recorded in the prior assessment as thirty days (to be confirmed in the Vercel dashboard). Listing data (proposed): until the landlord withdraws the listing, the property is let, or twelve months after publication, whichever is first. Landlord conversations (proposed): deleted six months after the listing decision.
	f) To what extent is the data being processed	Collection, recording, storage, publication, retrieval, correction on request and removal. No other operation is performed.
	g) Where data could be transferred to	Hosting and logs: Vercel, United States. Code and listing data: GitHub and Lovable, outside Kenya. Map tiles: OpenFreeMap and Esri. Other hosts permitted by the content security policy recorded in the prior assessment, namely Google Fonts, jsDelivr and Mapbox (to be verified, Annex 1, item V1). Messaging: Meta (WhatsApp). See Part 2, item 11, and Risk R3.
	h) How many individuals are likely to be affected by the project	Visitors: up to 50,000 a month, with an IP address only. Landlords and agents: the number of published listings, to be confirmed before launch.

5. How the data processing flow complies with the seven data protection principles

Principle	How the processing complies
a. Lawfulness, fairness and transparency	The lawful basis for each purpose is set out at Part 2, item 1. A privacy notice covering the third-party hosts, the hand-off to WhatsApp and email, hosting outside Kenya, retention and the rights of visitors and
Principle	**How the processing complies**
	landlords is to be published before launch (Action A4).
b. Purpose limitation	Data is used only to run the discovery service, publish listings, and keep the site secure. It is not used for marketing, profiling, resale or any secondary purpose.
c. Data minimisation	Nothing is collected from a browsing student. Each listing carries only the fields needed to let a student contact the landlord and judge the room. No identity-document number, personal photograph or payment data is published (Action A6).
d. Accuracy	The landlord confirms the listing details in writing before publication. Each listing shows the date it was last confirmed, and is removed when the landlord reports the room let or the details stale (Action A6).
e. Storage limitation	Retention periods are fixed at Part 1, item 4(e) and applied under a written procedure. Visitor data is not retained by UniHub.
f. Integrity and confidentiality	HTTPS only; security headers set in the Vercel configuration (to be verified, Annex 1, item V6); no database, no accounts and no administrative panel. The content security policy recorded in the prior assessment permits inline scripts, which weakens it and contradicts the statement in the prior assessment that no inline scripts are used. Tightening it is Action A9.
g. Accountability	This assessment, the code repository history, the deployment logs, the Records of Processing Activities (Action A11), the landlord authorisation forms and the takedown log together form the accountability record. The assessment is kept under review as recorded at Part 5.

Part 2: Necessity and proportionality of the processing in relation to the purpose

1. What is your lawful basis for processing?

Six purposes are distinguished. Version cited sub-paragraph references to section 30 of the Act that are to be checked against the Act. This assessment names each ground in words, and the Data Protection Officer is asked to confirm the references.

Purpose	Lawful basis (section 30 of the Act)	Necessity and proportionality
P1. Serve discovery pages and listings	Legitimate interests of the controller in operating a housing discovery service	Static pages only. No identifier is stored by UniHub. The visitor expects to be shown rooms and has not been asked for anything.
P2. Render the interactive campus map	Legitimate interests, the map being essential to campus-first discovery	Tiles are loaded from third parties and the request carries the visitor's IP address. No device location is requested. The listings work without the map.
P3. Let a student contact a landlord by WhatsApp or email	The student's consent, given by the clear affirmative act of clicking the link (hand-off only)	The student initiates the contact. UniHub does not receive the message. The button names the destination, and an email alternative is offered beside it.
P4. Receive and handle landlord enquiries sent by WhatsApp	Legitimate interests of the controller in obtaining supply, the landlord having initiated contact	The landlord writes first. The pre-filled message states the purpose. Only what is needed to decide on a listing is kept.
P5. Publish landlord and agent listing details	The landlord's or agent's written consent, withdrawable at any time	Publication is the purpose of the service. Only the fields listed at Part 1, item 3(a) are published. No identity-document number is published.
P6. Keep the site secure	Legitimate interests of the controller and its duty under the Act to secure personal data	Security headers and access controls are the minimum needed.

Consent reliability analysis

Two consents are relied on, and each is tested for whether it is freely given. For P3 the student chooses to click, nothing is lost by not clicking, and UniHub has no authority over the student, so no imbalance of the kind that arises between lecturer and student is present. For P5 the landlord is a commercial party with no dependence on UniHub.

The one weakness is the agent who lists a room on behalf of an owner. An agent can consent to the publication of the agent's own details, but not the owner's. The

verification procedure therefore requires proof of the agent's authority, and the owner's name is published only with the owner's own consent (Action A6).

2.	**How is consent to be obtained, if at all?**	**P3:** by clicking a button that names its destination. **P5:** by a written authorisation, signed or confirmed by the landlord on WhatsApp against the exact text to be published, before the listing goes live. The landlord may withdraw at any time, without reason, and the listing is removed within a stated period (proposed at forty-eight hours).
3.	**Does the processing actually achieve your purpose?**	Yes. A working prototype has been built and tested on synthetic data. It serves pages, filters listings, renders the map and hands the student off to WhatsApp or email.
4.	**Is there another way to achieve the same outcome?**	Four options were considered: (i) Build and demonstrate entirely on synthetic data. Adopted for all development, so that no real data enters the build environment. (ii) Replace the live map with a static image. This would remove the tile requests but would degrade discovery, so the map is kept with disclosure and deferred loading. (iii) Offer email contact only. This would reduce reach, because WhatsApp is the dominant channel among the target users. (iv) Leave discovery to informal WhatsApp groups. This is the status quo, which offers no review of listings. Option (ii) is rejected for the map. A similar step is adopted for fonts: self-hosting them removes a transfer to Google at no cost to the service (Action A9).
5.	**How will you ensure data quality and data minimization?**	The listing fields are fixed at Part 1, item 3(a). Before launch the founder inspects the listings data and the repository to confirm that no field beyond that inventory, and no real personal data other than authorised listings, is present, and repeats the check after any change (Action A6). Each listing shows the date it was last confirmed.
6.	**What information will you give individuals?**	A privacy notice on the site stating what is processed, by whom, on what basis, where it is hosted, how long it is kept, the rights of visitors and landlords, the contact point and the right to complain to the Office of the Data Protection Commissioner (Action A4). The landlord authorisation states the fields to be published, that hosting is outside Kenya, the retention period and the right to withdraw. The pre-filled WhatsApp message states its purpose.
7.	**How will you help to support their rights?**	A single named email contact is published. Requests to access, correct, delete or object may be made by email or WhatsApp, are logged on receipt, and are actioned within the time limits set by the Act and the Data Protection (General) Regulations, 2021 (to be confirmed by the Data Protection Officer). A student who asks what UniHub holds is told that nothing is

		held. A landlord's listing is corrected or removed on request (Action A7).
8.	**What measures do you take to ensure compliance by the Controller and Processor?**	The founder is responsible for compliance. The processors' data processing terms are reviewed and filed before launch (Action A1). A Data Protection Officer is appointed or an external officer engaged, and the position on registration with the Office of the Data Protection Commissioner is confirmed (Action A11).
9.	**What parties are involved in the processing and what are their specific roles?**	UniHub Kenya: data controller. Vercel: data processor, hosting and access logs. GitHub and Lovable: data processors, holding the code and listing data. OpenFreeMap, Esri, and the hosts of fonts and scripts: independent third parties that receive the visitor's IP address and do not act for UniHub. Meta (WhatsApp) and email providers: independent controllers of messages after the hand-off. Landlords and agents: data subjects, and independent controllers of whatever a student sends them. Students: data subjects. Data Protection Officer: advice and oversight. Office of the Data Protection Commissioner: regulator and route of complaint.
10.	**How do you safeguard the processing of the personal data?**	By collecting nothing from students; operating no accounts, database or administrative panel; serving over HTTPS only; setting security headers; loading the map only when the visitor scrolls to it; providing an email alternative to WhatsApp; and securing the GitHub, Vercel, Lovable and WhatsApp accounts with unique passwords and two-factor authentication (to be confirmed, Action A11).
11.	**How do you safeguard any international transfers?**	The transfers arise because the chosen providers host outside Kenya. Part VI of the Act governs them. The safeguards proposed are a minimal dataset; listing data that is published in any case; written consent to publication that states hosting outside Kenya; review and filing of the providers' data processing terms; and short retention. The Standard Contractual Clauses in a provider's addendum are a European instrument and do not of themselves establish compliance with Part VI. Their sufficiency, and that of the other safeguards, is a matter on which the written direction of the Data Protection Officer is expressly sought. Until it is given, this is treated as the open High risk (R3), and no real landlord data is to be committed to the repository or loaded onto any platform.

Part 3: Assessment of the risks to the rights and freedoms of data subjects

The assessment questions in the Guidance Note are answered below. Where the answer is Yes, the entry states the practical steps taken to identify and address the resulting privacy risk.

Question	Answer	Explanation and practical steps
1. Will the project involve the collection of new identifiable or potentially identifiable data about data subjects?	**YES, narrowly, at launch**	Nothing new is collected from a browsing student. From launch, landlord and agent listing details and enquiry conversations are collected. Steps: the field inventory at Part 1, item 3(a) is fixed; the listings data and repository are inspected before launch and after any change (Action A6); each landlord authorises publication in writing; retention periods are fixed (Part 1, item 4(e)).
2. Will the project compel data subjects to provide information about themselves, where they have little awareness or choice?	**NO**	Students provide nothing. A landlord supplies details only after choosing to message UniHub, and may withdraw. Full information is given before any listing goes live (Action A4).
3. Will identifiable information be shared with organisations or people who have not previously had routine access to it?	**YES**	Hosting and logs sit with Vercel, and code and listing data with GitHub and Lovable, none of which has had access before. Tile, font and script hosts receive visitors' IP addresses. Listing details become visible to every visitor. Steps: the providers' terms are reviewed and filed (Action A1); the Data Protection Officer's direction on transfers is obtained (Action A2); the third-party hosts are reduced to those that are necessary (Action A9); published fields are minimised (Action A6).
4. Are you using information about data subjects for a purpose it is not currently used for, or in a new way?	**YES, narrowly**	The purpose is unchanged. Landlords already circulate room details in WhatsApp groups to find tenants. What changes is the audience, which becomes any visitor to a public page that a search engine may index. Steps: the landlord's authorisation states that publication is on a public website; the telephone number is offered through contact buttons rather than printed as plain text where practicable; no secondary use is made (Action A6).
5. Would the use of the information be likely to raise privacy concerns or expectations, for example because it is sensitive or private?	**YES, in a limited sense**	A landlord's property details are sensitive personal data within the Act's definition, and a precise pin can identify a person's home. Steps: location is published at neighbourhood or building level and not as an exact doorway coordinate; images are reviewed before publication (Action A8); the Data Protection Officer is asked to confirm whether the property-details limb is engaged (Part A, criterion III).

Question	Answer	Explanation and practical steps
6. Will the project require you to contact data subjects in ways they may find intrusive?	**NO**	UniHub contacts no one unprompted. There is no marketing and no mailing list. Contact with a landlord follows the landlord's own message.
7. Will the project result in decisions that can have a significant impact on data subjects, for example affecting a service they receive?	**NO**	No decision is made about any student. The decision to publish or decline a landlord's listing is made by a person after review, not automatically, and the reason is given to the landlord on request.
8. Does the project involve new technology that might be perceived as privacy intrusive, such as biometrics, facial recognition or automated decision-making?	**YES, in a qualified sense**	The site uses keyless vector mapping and muted video autoplay, and is built with AI-assisted code generation through the Lovable editor. It uses no biometrics, no facial recognition and no automated decision-making. Steps: the built site and repository are inspected for undeclared network calls, scripts and stored identifiers before launch and after any change (Action A10).
9. Is a service being transferred to a new supplier (re-contracted) at the end of an existing contract?	**NO**	No existing service or contract is being transferred.
10. Is processing of identifiable data being moved to a new organisation, with the same staff and processes?	**NO**	No processing is moved from another organisation. Listing details come from the landlord directly.

Part 4: Measures envisaged to address the risks (risk register)

Name of data controller: UniHub Kenya. **Project:** UniHub. **Risk register owner:** Mr. Shadrack Baraka Mwahanga, Founder and Developer.

Scoring. Impact and Likelihood are each rated 1 (very low) to 5 (very high). Score is Impact multiplied by Likelihood. Bands: 1 to 6 Low; 8 to 12 Medium; 15 to 25 High.

Basis of assessment. Impact is measured by the incremental effect on the data subject of this project, not by the effect of finding a room or contacting a landlord as such, which students already do through informal channels. Likelihood is assessed with the current controls in place. Controls marked “to be verified” are carried from the prior assessment and are listed in Annex 1.

Risk register with current controls

Risk	Description	Consequence	Current controls	Impact	Likelihood	Score	Band
R1	Third-party hosts receive the visitor's IP address and user agent on page load: the map tile providers (OpenFreeMap, Esri) and, as the content security policy recorded in the prior assessment permits, hosts of fonts, scripts and map services (Google Fonts, jsDelivr, Mapbox).	IP addresses reach recipients not yet named in a privacy notice, some outside Kenya. No identity is disclosed.	Map mounts only when scrolled into view; no device location requested; content security policy limits hosts (to be verified).	2	4	**8**	**Medium**
R2	A student's telephone number and message reach the landlord and Meta when the student clicks WhatsApp, before the student has thought about it.	A direct identifier reaches a stranger. UniHub does not receive it but may be blamed for it.	Button names its destination; external links carry noopener and noreferrer; email alternative offered.	3	3	**9**	**Medium**

R3	Traffic metadata (IP address, headers, request path) is processed by Vercel in the United States on every request, and code and listing data are held by GitHub and Lovable outside Kenya, without a documented basis under Part VI of the Act.	Transfer without a recorded basis. UniHub carries the compliance exposure.	Request bodies not logged by default (to be verified); no database; no real data yet loaded.	3	5	**15**	**High**

Risk	Description	Consequence	Current controls	Impact	Likelihood	Score	Band
R4	Error reporting, if active in production, sends IP addresses or URL fragments to a third party.	Undisclosed disclosure of visitor data.	Reporting active in development only (to be verified).	2	2	**4**	**Low**
R5	A student reads "Verified listings" as meaning that the landlord's identity is verified, and relies on a landlord who has misrepresented.	Housing and financial harm to the student; a failure of transparency.	Wording under review. No other control yet.	4	3	**12**	**Medium**
R6	Landlord and agent details, including property details, are published or held without a documented basis, consent or takedown route, or an agent lists an owner's details without authority.	Loss of control over personal data; publication of sensitive property details; complaint by an owner.	None yet beyond the intention to obtain written consent. No real listing is loaded.	4	3	**12**	**Medium**
R7	Photographs, video or map pins show identifiable people, number plates, neighbouring premises or a precise home location.	Incidental disclosure of third parties' data.	None yet.	2	3	**6**	**Low**
R8	Muted video autoplay downloads clips the student did not ask for, using mobile data the student pays for.	A cost to the student. A fairness point more than a privacy harm.	Plays only when visible; disabled under reduced-motion and data-saver settings; clips compressed (to be verified).	2	3	**6**	**Low**
R9	The optional satellite imagery layer shows high-resolution views of residential areas.	Concern about surveillance of homes, although the imagery is already public.	Dark vector map is the default; satellite is opt-in (to be verified).	2	3	**6**	**Low**

R10	No Data Protection Officer is appointed, registration with the Office of the Data Protection Commissioner is unconfirmed, and no records of processing exist.	Weak accountability and exposure to complaint or enforcement at launch.	This assessment.	2	5	**10**	**Medium**

Actions to reduce the risks

All actions marked BEFORE LAUNCH are to be complete before any real listing is published or the site is made public.

Action	Risk	Action to be taken	Owner	Deadline
A1	R3	Review and execute the Vercel data processing addendum, and review the GitHub and Lovable terms. Record the transfer basis in the Records of Processing Activities.	Founder with Data Protection Officer	**BEFORE LAUNCH**
A2	R3	Obtain the written direction of the Data Protection Officer on whether the transfer safeguards are sufficient under Part VI of the Act.	Data Protection Officer	**BEFORE LAUNCH**
A3	R3	Confirm in the Vercel dashboard the hosting region, log retention and that request bodies are not logged. File a record of the check.	Founder	**BEFORE LAUNCH**
A4	R1, R2, R3	Publish a privacy notice stating the lawful bases, the third-party hosts, the hand-off to WhatsApp and email, hosting outside Kenya, retention, the rights of visitors and landlords, the contact point and the right to complain to the Office of the Data Protection Commissioner.	Founder with Data Protection Officer	**BEFORE LAUNCH**
A5	R5	Replace "Verified listings" with "Landlord details reviewed before publish" throughout the site, with a short explanation of what the review covers.	Founder	**BEFORE LAUNCH**
A6	R5, R6	Write the landlord verification procedure (identity sighted, ownership or authority confirmed, contact tested), the written listing authorisation, the fixed list of published fields and the last-confirmed date. Obtain the owner's own consent before publishing an owner's name. Inspect the listings data and repository for any field or real data outside the inventory.	Founder	**BEFORE LAUNCH**
A7	R6	Adopt a correction and takedown procedure with removal within forty-eight hours of a request (proposed). Publish a single contact point and keep a log of each request, its date, the action taken and the date completed.	Founder	**BEFORE LAUNCH**
A8	R7	Adopt an image and video checklist (no identifiable people or number plates, neighbouring premises excluded). Publish location at neighbourhood or building level only.	Founder	**BEFORE LAUNCH**
A9	R1	Tighten the content security policy so that inline scripts are not permitted. Remove any host that is not used, confirming whether Mapbox is used. Self-host fonts. Record	Founder	**BEFORE LAUNCH**

Action	Risk	Action to be taken	Owner	Deadline
		the remaining third-party hosts in the privacy notice.		
A10	R4, R8, R9	Inspect the built site and repository for undeclared scripts, stored identifiers and network calls. Confirm error reporting is disabled in the production build, and that the dark map and the data-saver controls work as described. Repeat after any change.	Founder	**BEFORE LAUNCH, then on each change**
A11	R10	Create the Records of Processing Activities. Appoint a Data Protection Officer or engage an external officer. Confirm whether registration with the Office of the Data Protection Commissioner is required. Enable two-factor authentication on the GitHub, Vercel, Lovable and WhatsApp accounts.	Founder	**BEFORE LAUNCH**
A12	All	Adopt an incident response plan providing for notification of a breach to the Office of the Data Protection Commissioner within seventy-two hours.	Founder with Data Protection Officer	**BEFORE LAUNCH**

Residual risk after the actions

Risk	Actions	Residual impact	Residual likelihood	Residual score	Decision
R1	A4, A9	2	2	**4**	Accept. Disclosed and reduced to necessary hosts.
R2	A4	2	2	**4**	Accept. Student's own act, with an email alternative.
R3	A1, A2, A3, A4	2	3	**6**	Accept only on the written direction of the Data Protection Officer.
R4	A10	1	1	**1**	Accept.
R5	A5, A6	2	2	**4**	Accept. Claim qualified and procedure documented.
R6	A6, A7	2	2	**4**	Accept. Consent, minimised fields and takedown route in place.
R7	A8	1	2	**2**	Accept.
R8	A10	1	2	**2**	Accept.
R9	A10	1	2	**2**	Accept.
R10	A11, A12	1	3	**3**	Accept.

Summary

Ten risks were identified. With current controls, one is High (R3, score 15), five are Medium (R1, R2, R5, R6 and R10) and four are Low (R4, R7, R8 and R9). On completion of the listed actions every risk falls in the Low band, the highest residual score being 6. R3 is the one risk the founder can't close alone. Its residual score depends on the written direction of the Data Protection Officer, and if that officer takes the view that a High risk remains, the Office of the Data Protection Commissioner is to be consulted before processing begins.

Part 5: Sign off and record outcomes

Outcome of the assessment

The assessment concludes that the processing is not likely to result in a high risk to the rights and freedoms of data subjects once the Part 4 actions are complete and the Data Protection Officer has given written direction on the transfer risk (R3), and that the platform may then be launched.

The reasoning is that UniHub collects nothing from a browsing student. The only personal data it will publish is the listing details that a landlord or agent chooses to supply and authorises in writing. Measured against the informal channels the platform replaces, the incremental effect on any student is small. The incremental effect on a landlord is a wider audience for details already circulated, and that is why Risk R6 is rated Medium, with consent, minimised fields and a takedown route as the controls. With current controls one risk is High (R3) and five are Medium. After the actions every risk is in the Low band.

The following conditions are to be satisfied before any real listing is published or the site is made public:

- The Data Protection Officer has given written direction on the sufficiency of the transfer safeguards (Risk R3).
- Actions A1 to A12 at Part 4 are complete.
- Written authorisation has been obtained from each landlord or agent whose listing is published, and from the owner where an owner is named.
- The privacy notice is published, and the position on registration with the Office of the Data Protection Commissioner is confirmed.

Submission to the Office of the Data Protection Commissioner

Section 31 of the Act requires a DPIA where processing is likely to result in a high risk, and paragraph 9(B) of the Guidance Note provides that a DPIA is to be submitted sixty days before processing begins.

This assessment concludes that the processing is not likely to result in a high risk once the actions are complete. On that footing no obligation to submit arises. If the Data Protection Officer takes a different view of the transfer question at Risk R3, or if any residual high risk were to be accepted, the Office of the Data Protection Commissioner is to be consulted before processing proceeds, and the launch date is to allow for the sixty-day period.

Item description	Entry
Measures approved by	_____ Date: _____ (To be completed by the Data Protection Officer. Note: integrate the actions

	at Part 4 back into the project plan, with a date and a person responsible for
Item description	**Entry**
	completion of each.)
Residual risks approved by	_____ Date: _____ (No residual high risk is identified, on the footing that the Data Protection Officer gives direction on R3. All ten residual scores are in the Low band, the highest being 6.)
DPO advice provided	_____ Date: _____ (The Data Protection Officer is asked to advise on compliance, on the Part 4 measures, and on whether the processing may proceed.)
Summary of DPO advice	To be completed by the Data Protection Officer. The specific direction sought is on: Part 2, item 11, and Risk R3, whether the transfer safeguards are sufficient; Part A, criterion III, whether landlords' property details engage the sensitive personal data limb; Part 2, item 1, the section 30 references; and Risk R10, the timetable for appointment and registration.
DPO advice accepted or overruled by	_____ Date: _____ (If overruled, the reasons must be recorded.)
Comments	
Consultation responses reviewed by	Mr. Shadrack Baraka Mwahanga, Founder and Developer. The views of data subjects have not been sought, because no student or landlord has been approached. A student focus group of five to ten and a landlord pilot group of three to five are planned before launch. Any concern raised that bears on this assessment will be recorded here and the assessment revised before processing begins.
Comments	
Consultation with the Office of the Data Protection Commissioner: response	Not yet required. To be initiated if the Data Protection Officer directs, or if any residual high risk is to be accepted, in accordance with Part 5 of the Guidance Note.
This DPIA will be kept under review by	Mr. Shadrack Baraka Mwahanga, under the oversight of the Data Protection Officer. Review points: before the first real listing is published; on any change to the dataset, platform or purpose; quarterly from launch; and on any of the triggers below.

Review

A fresh assessment, or an addendum, is required before any of the following is introduced:

- Accounts, favourites or saved searches.
- Analytics or tracking of any kind.

- A landlord dashboard in which landlords log in and manage listings.
- Payments, deposits or rent collection.
- A change of hosting provider.

- A security incident involving personal data.
- An update to the Office of the Data Protection Commissioner's guidance.

Sign-off

Role	Name	Signature	Date
Data Controller (Founder)	Mr. Shadrack Baraka Mwahanga	_____	_____
Data Protection Officer	[To be appointed]	_____	_____
Technical Lead	Mr. Shadrack Baraka Mwahanga	_____	_____

Prepared and submitted by: Mr. Shadrack Baraka Mwahanga, Founder and Developer, UniHub Kenya.

Date: 9th October 2026.

Annexes: (1) Statements to be verified against the repository (below). (2) Privacy notice, to be prepared (Action A4). (3) Landlord verification procedure and listing authorisation, to be prepared (Action A6). (4) Incident response plan, to be prepared (Action A12). (5) Processors' data processing terms, to be obtained and filed (Action A1). (6) Records of Processing Activities, to be prepared (Action A11).

Annex 1: Statements to be verified against the repository

The code repository was not available when this assessment was drafted, so every statement below about what the application does is carried from the prior assessment and has not been checked against the code. Each is to be checked, and the result recorded here, before the assessment is signed.

Item	Statement to be verified	Where to check	Bears on
V1	No cookies, local storage, session storage, fingerprinting, analytics or tag scripts.	Source and built output; the browser's storage and network panels.	Part A criterion II; Part 1; R1
V2	Error reporting is active in development only and is absent from the production build.	The error reporting module and the built output.	R4
V3	No device location is requested, and the map mounts only when scrolled into view.	The campus map component.	Part 1; R1
V1	The third-party hosts actually contacted at run time, against those the content security policy permits: OpenFreeMap, Esri, Google Fonts, jsDelivr and Mapbox.	The Vercel configuration and the browser's network panel.	R1; Action A9
V5	Where the listings data is held (a file in the repository or a database) and whether any real listing is already committed.	The listings data file and repository history.	R6; R3
V6	The security headers as recorded in the prior assessment, and that the policy permits inline scripts.	The Vercel configuration.	Part 1(f); Action A9
V7	The satellite layer is opt-in with the dark vector map as default; video autoplay respects reduced-motion and data-saver settings; clip sizes are as stated.	The map and video components and the media folder.	R8; R9
V8	The WhatsApp number is read from an environment variable and validated; the pre-filled message states its purpose; the contact page has no form that collects data.	The marketing components and the contact route.	R2; P3; P4
V9	Whether the repository is public or private, and that it holds no real personal data.	The repository settings and history.	R3; R6
V10	Hosting region, access log retention and absence of request-body logging.	The Vercel dashboard.	R3; Action A3

Changes from the prior assessment

- Criterion III of the screening now applies in part at launch, because property details are sensitive personal data under the Act. the prior assessment stated that none was processed.

- A new Risk R6 covers publication of landlord and agent details, and R7 covers images and pins. the prior assessment stated that no landlord personal data is stored, although landlord conversations are held on WhatsApp.
- Risk R5 scores 12, which is Medium under the bands used here. The prior assessment labelledit High.
- The sign-off wording in the prior assessment stated that all risks were in the Low band under current controls, which contradicted its own risk matrix. This assessment states the counts from the register.
- The screening conclusion in the prior assessment miscounted the criteria that apply in part. It is corrected, and the question whether section 31 compels a DPIA is referred to the Data Protection Officer.
- The statement that no inline scripts are used is replaced by a note that the recorded policy permits them. The third-party hosts are widened to those the policy permits.
- Sub-paragraph references to section 30 are replaced by named grounds, and the fixed fourteen-day response period is replaced by a reference to the Act and the Data Protection (General) Regulations, 2021, both for confirmation.
